Acknowledgements

We are grateful to Mark Joy, Michael O'Bryan, Sebastien Belanger and Jean-François Tremblay for their helpful comments and suggestions.

We thank Banu Cartmell, Marie Cavanaugh, John Chambers, James Chapman, Stuart Culverhouse, Patrisha de Leon-Manlagnit, Archil Imnaishvili, Marc Joffe, Grahame Johnson, James McCormack, Jamshid Mavalwalla, Philippe Muller, Papa N'Diaye, Jean-Sébastien Nadeau, Alexandre Ruest, John Walsh, Carolyn Wilkins, Tim Willems and Peter Youngman for their contributions to earlier research papers on the database, Christian Suter for sharing previously unpublished data he compiled with Volker Bornschier and Ulrich Pfister in 1986, Carole Hubbard for her excellent editorial assistance, and Michael Dalziel and Natalie Brule, and Sandra Newton, Sally Srinivasan, Angel Rai, and Rebecca Mari, respectively, for their help designing the Bank of Canada and Bank of England web pages, and Miranda Wang for her efforts in updating the database. Any remaining errors are the sole responsibility of the authors.

This paper provides details about the sources we use to compile and update the [BoC-BoE sovereign default database](#).⁵

Specifically, it includes:

- An Appendix that includes our data reliability score and the data sources we use for each sovereign included in the database
- a general listing of References, which cross-references to the country-by-country sources listed in the Appendix

We welcome feedback and questions on the BoC-BoE database project, including the sources and references included in this document.

Assessing data reliability

Using a similar approach to that followed by Cruces and Trebesch (2011), we score the relative data quality of our country-by-country estimates of debt in default. On a scale of 1 (denoting high reliability) to 4 (denoting least reliability), we determine a summary score based on the average of the sub-scores assigned to four variables:

- a) years in which default occurred
- b) types of debt in default and/or domestic arrears
- c) characteristics of debt restructured (e.g., interest rate, original maturity)
- d) consistency of information from different sources

Of course, there must be an element of judgment in an exercise that measures data reliability in relative terms. The following example for Jamaica helps illustrate the process we follow.

We highlight Jamaica because, under our definition, it has been in default on seven types of debt—IMF, Paris Club, other official creditors, private creditors, foreign currency bank loans, foreign currency bonds and local currency debt, as well as having domestic arrears—at various times over the 1960–2022 period.

We assign a score of 3 to variable a for Jamaica since we have a fair degree of confidence that we have identified all cases of default in which they occurred, and for domestic arrears in 1992–2022. We are relatively more confident that we have identified all the types of debt involved in each case, so we score variable b at 2. We assign a score of 3 to variable c, which addresses our knowledge about the characteristics of the debt restructured, because we are less confident about our estimates of the value of debt restructured in the 1970s and 1980s than about debt restructured more recently. We find that the information from the different sources we consulted is reasonably consistent. But we assign a score of 3 to subcategory (d) because information on external arrears owed to official creditors that come from the World Bank’s Databank is subject to revision. Finally, we average the results of the subcategories, resulting in an overall score of 3.

Note: Local currency debt in default in 1999–2001 reflects interest arrears and the conversion of some instruments into longer-term low-interest foreign currency debt financed by external donors.

26. Cambodia (data reliability score: 3)

AidData (2021), Asia Times (2021), Boughton (2001), CSB (2023), Das, Papaioannou and Trebesch (2012), Hurley, Morris and Portelance (2018), IMF Annual Reports (1978–1993), IMF staff reports (1972–1991), IMF (2013a), Kratz, Feng and Wright (2019), Open Development Cambodia (2018), Paris Club (2022b), Prasso (2001), Rathavong (2018), World Bank Group (2012), World Bank IDS (2022), Yun (2010). Note: The 1975 local currency default was the result of the Pol Pot regime's abolition of money. As central bank records are not available, we used currency data for Laos, with comparable per capita US-dollar GDP in 1975, to calculate a proxy value for Cambodian defaulted currency.

27. Cameroon (data reliability score: 3)

AidData (2021), Beers and Chambers (2006), CARI (2023), Cruces and Trebesch (2011), Das, Papaioannou and Trebesch (2012), Hurley, Morris and Portelance (2018), Kratz, Feng and Wright (2019), Imbert, et. al. 39. Cuba (data reliability score: 3)

Acosta and Frank (2019), AidData (2021), Cruces and Trebesch (2011), Das, Papaioannou and Trebesch (2012), Economist Intelligence Unit (2017), FBPC (1962), Hurley, Morris and Portelance (2018), IMF staff reports (1961), International Financial Statistics (IMF various years), LeoGrande (2016), Kratz, Feng and Wright (2019), Paris Club (2022b), Reuters. 2022g, Rieffel (1985), Reuters (2021a), Tellimer (2019), Walters, R. 1970. Note: Cuba's 1961 local currency default was the result of a confiscatory currency reform. Cuba's foreign currency bonds defaulted in 1960–1961 when they were repudiated by the government. We have revised values for defaulted Paris Club debt in 1986–2014 to reflect interest arrears restructured in the 2015 agreement. We have also revised the value of bank loans in default between 1985 and 2022 to reflect additional information on their terms.

155. Venezuela (data reliability score: 4)

Banco Central de Venezuela (2017), Beers and Chambers (2006), Castellano, Figueroa and Lanau (2019), Coughlin (2019), Cruces and Trebesch (2011), Culverhouse (2018), Foy, Rathbone and Allen (2017), Garip (2020), IDB (2019), International Financial Statistics (IMF various years), IMF staff reports (1980–1998), Martin (2017), Paraguassu (2017), Paris Club (2022b), S&P Global Ratings (2020), Tellimer (2019), Tudela (2011), Venezuelanalysis.com (2022). Note: Venezuela's 2016 local currency default was the result of a confiscatory currency reform.

156. Vietnam (data reliability score: 3)

Boughton (2001), Cruces and Trebesch (2011), Das, Papaioannou and Trebesch (2012), International Financial Statistics (IMF various years), IMF annual reports (1984–1993), IMF staff reports (1989–2022), Mas (1995), Paris Club (2022b), Pravda (2011), Tellimer (2019), World Bank IDS (2022). Note: Vietnam's 1975 local currency default resulted from the conversion of South Vietnamese currency to North Vietnamese currency on confiscatory terms. The 1975, 1978 and 1985 local currency defaults were the result of confiscatory currency reforms. As central bank records are not available for 1978, we used currency data for Laos, with comparable per capita US-dollar GDP, to calculate a proxy value for converted Vietnamese currency.

157. West Bank and Gaza (data reliability score: 4)

IMF staff reports (2004–2022).

158. Yemen (data reliability score: 4)

AidData (2021), Cruces and Trebesch (2011), Das, Papaioannou and Trebesch (2012), Hurley, Morris and Portelance (2018), IMF staff reports (2009-2022), Paris Club (2022b), World Bank Group (2012, 2021), World Bank IDS (2022).

159. Yugoslavia (data reliability score: 3)

Beers and Chambers (2006), Cruces and Trebesch (2011), Das, Papaioannou and Trebesch (2012), Fleming and Sertic (1962), IMF staff reports (1965–1969), Paris Club (2022b), Stanič (2001), OECD (1984/1985 to 2002), World DataBank via Haver. Note: The 1991 default on a foreign currency bond was an effective debt repudiation, as it was never assumed by Yugoslavia's successor states.

160. Zambia (data reliability score: 3)

AidData (2021), Boughton (2001), CARI (2023), Cruces and Trebesch (2011), Das, Papaioannou and Trebesch (2012), FT (2022), Hurley, Morris and Portelance (2018), Kratz, Feng and Wright (2019), IMF annual reports (1985–1995), IMF (2016), IMF staff reports (1994–2023), Paris Club (2022b), Rieffel (1985), World Bank Group (2012, 2022a), World Bank IDS (2022).

161. Zimbabwe (data reliability score: 3)

AidData (2021), Alden and Jiang (2019), CARI (2023), CCFB (1981), Hurley, Morris and Portelance (2018), IMF annual reports (2001–2019), IMF staff reports (2000–2022), Kratz, Feng and Wright (2019), Makoshori (2015), Mambondiyani (2018), Paris Club (2022b), Republic of Zimbabwe (2015), RWR Belt and Road Monitor (2020), World Bank Group financial statements (2001–2022), World Bank Group (2022a), World Bank IDS (2022). Note: The local currency default in 2001 reflected a unilateral extension of debt maturities. Foreign currency bonds in default since 2009 reflect obligations owed to mining companies by the Reserve Bank that were assumed by the government in 2015.
