BANK OF ENGLAND

Bank of England Statistics release note V1.0.0

30th November 2018

Summary

- The Bank of England Statistics data point model (DPM) further extends the eba, Bank of England banking, and stress testing dictionary.
- The taxonomy has two entry points (or 'modules') – AS and FV.
- The annotated templates are a representative visualisation of the template design alongside the modelling, as exists in the taxonomy itself.
- The sample instances have been generated using DPM Architect Editor and therefore contain random facts. They are not valid against the business validations.
- The excel validation documentation contain algebraic representations of the assertions that are coded in the taxonomy.
- The DPM Dictionary contains information on all domains, dimension, members and sub-domains (AKA hierarchies).
