Survey results | 2018 Q2

## **Credit Conditions Survey**

2018 Q2

As part of its mission to maintain monetary stability and financial stability, the Bank needs to understand trends and developments in credit conditions. This quarterly survey of bank and building society lenders is an input to this work. Lenders are asked about the past three months and the coming three months. The survey covers secured and unsecured lending to households; and lending to non-financial corporations, small businesses, and to non-bank financial firms.

This report presents the results of the 2018 Q2 survey. It was conducted between 21 May and 8 June 2018.

Additional background information on the survey can be found in the 2007 Q3 *Quarterly Bulletin* article 'The Bank of England Credit Conditions Survey'.

This report, covering the results of the 2018 Q2 survey, and copies of the questionnaires are available on the Bank's website at

www.bankofengland.co.uk/credit-conditions-survey/2018/2018-q2.

The 2018 Q3 Credit Conditions Survey will be published on 11 October 2018.

## **Credit Conditions Survey**

### 2018 Q2

#### Supply

- Lenders reported that the availability of secured credit to households was unchanged again in the three months to mid-June 2018 and expected no change over the next three months to mid-September 2018.
- The availability of unsecured credit to households was reported to have been unchanged in Q2 and was expected to decrease slightly in Q3 (Chart 1). Credit scoring criteria for the granting of other unsecured loans were reported to have become significantly harder in Q2 and the proportion of applications that were approved fell slightly. The proportion of approvals of credit card loan applications increased significantly in Q2.
- The overall availability of credit to the corporate sector was reported to have been unchanged again in Q2. Within this, the availability of credit provided to small businesses was reported to have increased in Q2. This is the first time lenders have reported greater credit availability to businesses of any size since 2015 Q3. The overall availability of credit to the corporate sector was expected to remain unchanged in Q3.

#### Demand

- Lenders reported that household demand for secured lending for remortgaging increased in Q2, and expected demand to increase slightly in Q3. Demand for secured lending for house purchase was reported to have been unchanged in Q2, and was expected to be unchanged again in Q3.
- Overall demand for unsecured lending was unchanged in Q2. Lenders expected an increase in the demand for total unsecured lending in Q3, comprised of an expected increase in demand for credit card lending and a slight decrease for other unsecured lending (Chart 2).
- Lenders reported a significant increase in demand for corporate lending from small businesses in Q2, and expected demand to be unchanged in Q3 (Chart 3). For medium-sized PNFCs, demand for lending was reported to have been unchanged but was expected to increase in the next quarter. Demand for corporate lending from large PNFCs was reported to have decreased slightly in Q2 and was expected to decrease further in 2018 Q3.

#### Loan pricing

- Overall spreads on secured lending to households relative to Bank Rate or the appropriate swap rate were reported to have
  narrowed significantly in 2018 Q2, for the sixth consecutive quarter. A slight widening of spreads was expected in Q3 (Chart 4). Within
  this, spreads on both buy-to-let and prime lending were reported to have tightened significantly in Q2. A slight widening was expected
  for prime lending in Q3, but a slight narrowing was expected for buy-to-let lending.
- Lenders reported that overall unsecured lending spreads tightened in Q2, driven by a significant narrowing in spreads on other unsecured lending products (Chart 5). Overall unsecured lending spreads were expected to widen slightly in Q3. The length of interest free period for balance transfers on new credit card lending decreased significantly again in Q2 and was expected to decrease slightly in Q3.
- Spreads on lending to businesses narrowed for small and large sized firms in Q2, and were expected to be unchanged for both in Q3. Spreads on loans to medium-sized firms remained unchanged in Q2 but were expected to widen in the next 3 months.

#### Defaults

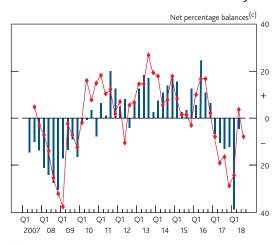

- Lenders reported that default rates on secured loans to households fell in Q2, and expected these to be unchanged in Q3. Losses given default on secured loans fell slightly in Q2, and were expected to be unchanged over 2018 Q3.
- Default rates increased for total unsecured lending in Q2, driven largely by a significant increase in default rates on credit card loans (Chart 6). Lenders expected a further increase in default rates for total unsecured lending in Q3.
- Lenders reported that default rates on loans to corporates increased for small and large sized businesses, but were unchanged for medium-sized PNFCs. Defaults rates for all sizes of businesses were expected to increase in Q3.

This report presents the results of the 2018 Q2 survey. It was conducted between 21 May and 8 June 2018. The results are based on lenders' own responses to the survey. They do not necessarily reflect the Bank's views on credit conditions. To calculate aggregate results, each lender is assigned a score based on their response. Lenders who report that credit conditions have changed 'a lot' are assigned twice the score of those who report that conditions have changed 'a little'. These scores are then weighted by lenders' market shares. The results are analysed by

calculating 'net percentage balances' — the difference between the weighted balance of lenders reporting that, for example, demand was higher/lower or terms and conditions were tighter/looser. The net percentage balances are scaled to lie between ±100.

This report and copies of the questionnaires are available on the Bank's website at www.bankofengland.co.uk/credit-conditions-survey/2018/2018-q2

#### Chart 1 Household unsecured credit availability(a)(b)

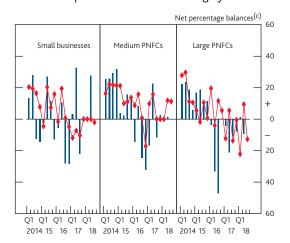

- (a) Net percentage balances are calculated by weighting together the responses of those lenders who answered the question. The blue bars show the responses over the previous three months. The red diamonds show the expectations over the next three months. Expectations balances have been moved forward one quarter so that they can be compared with the
- actual outturns in the following quarter.

  (b) Question: 'How has the availability of unsecured credit provided to households changed?'.

  (c) A positive balance indicates that more unsecured credit is available.

#### Chart 3 Corporate demand for lending by firm size(a)(b)

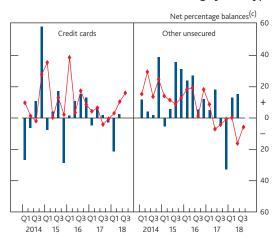

- (a) See footnote (a) to Chart 1.
  (b) Question: 'How has overall demand for lending from small businesses, medium PNFCs and large PNFCs changed?'.
- (c) A positive balance indicates an increase in demand.

Chart 5 Spreads on unsecured lending by loan type(a)(b)(c)

- See footnote (a) to **Chart 1**. Spreads are over Bank Rate or the relevant swap rate.
- Ouestion: 'How have spreads on credit card/other unsecured lending products changed?'
- (c) Question: 'How have spreads on credit card/other unsecured terruing products changed (d) A positive balance indicates that spreads have fallen such that, all else being equal, it is cheaper for households to borrow.

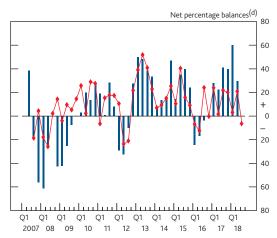

Chart 2 Demand for unsecured lending by loan type(a)(b)

- (a) See footnote (a) to Chart 1.
- (b) Question: 'How has demand for credit card/other unsecured lending from households changed?'.

   (c) A positive balance indicates an increase in demand.

Chart 4 Spreads on secured lending to households(a)(b)(c)

- (a) See footnote (a) to Chart 1.
   (b) Spreads are over Bank Rate or the relevant swap rate.
   (c) Question: 'How have overall secured lending spreads changed?'.
- (d) A positive balance indicates that spreads have fallen such that, all else being equal, it is cheaper for households to borrow.

Chart 6 Default rates on unsecured lending to households(a)(b)

- (a) See footnote (a) to Chart 1.
   (b) Question: 'How has the default rate on credit card/other unsecured loans to households changed?'.
- (c) A positive balance indicates an increase in the default rate

#### Annex 1

### Secured lending to households questionnaire results

To calculate aggregate results, each lender is assigned a score based on their response. Lenders who report that credit conditions have changed 'a lot' are assigned twice the score of those who report that conditions have changed 'a little'. These scores are then weighted by lenders' market shares. The results are analysed by calculating 'net percentage balances' — the difference between the weighted balance of lenders reporting that, for example, demand was higher/lower or terms and conditions were tighter/looser. The net percentage balances are scaled to lie between ±100. This annex reports the net percentage balance of respondents for each question in the secured lending questionnaire.

Positive balances indicate that lenders, on balance, reported/expected demand/credit availability/defaults to be higher than over the previous/current three-month period, or that the terms and conditions on which credit was provided became cheaper or looser respectively.

Where the survey balances are discussed, descriptions of a 'significant' or 'marked' change refer to a net percentage balance greater than 20 in absolute terms, and a 'slight' change refers to a net percentage balance of between 5 and 10 in absolute terms. Survey balances between 0 and 5 in absolute terms are described as unchanged.

The first Credit Conditions Survey was conducted in 2007 Q2 and additional questions have been included since 2007 Q4. A full set of results is available in Excel on the Bank's website at

www.bankofengland.co.uk/credit-conditions-survey/2018/2018-q2.

<sup>(</sup>a) Net percentage balances are calculated by weighting together the responses of those lenders who answered the question by their market shares. Positive balances indicate that lenders, on balance, reported/expected demand/credit availability/defaults to be higher than over the previous/current three-month period, or that the terms and conditions on which credit was provided became cheaper or looser respectively.(b) A positive balance indicates that the changes in the factors described have served to increase credit availability.

Annex 2 Unsecured lending to households questionnaire results

The methodology for calculating, and interpretation of, the aggregate results are as described in Annex 1.

<sup>(</sup>a) Net percentage balances are calculated by weighting together the responses of those lenders who answered the question by their market shares. Positive balances indicate that lenders, on balance, reported/expected demand/credit availability/defaults to be higher than over the previous/current three-month period, or that the terms and conditions on which credit was provided became cheaper or looser respectively.
(b) A positive balance indicates that the changes in the factors described have served to increase credit availability/demand.
(c) A positive balance indicates an improvement in the credit quality of new borrowing.
(d) A positive balance indicates an increase in maximum maturities on new loans. The sign convention was changed in 2009 Q4 and was applied to the back data accordingly.

Annex 3
Corporate lending questionnaire results

The methodology for calculating, and interpretation of, the aggregate results are as described in Annex 1.

<sup>(</sup>a) Net percentage balances are calculated by weighting together the responses of those lenders who answered the question by their market shares. Positive balances indicate that lenders, on balance, reported/expected demand/credit availability/defaults to be higher than over the previous/current three-month period, or that the terms and conditions on which credit was provided became cheaper or looser respectively.
(b) A positive balance indicates that the changes in the factors described have served to increase credit availability/demand.
(c) A positive balance indicates an improvement in the credit quality of new borrowing.
(d) A positive balance indicates an increase in new corporate loan tenors. The sign convention was changed in 2009 Q3 and was applied to the back data accordingly.
