

# As safe as the Bank of England

## Instructions

Your task is to draw your own Safe, to ensure all the gold and banknotes in the vaults are protected. Think of different features and functions you could use to enable the best possible security. Use your imagination and be as creative as you can. Have a look at our own gold vaults on our [website](#) for inspiration!

## Design tips

Safes need to be very secure to prevent unauthorised access and protect its valuable contents. You can design any type of safe you like, just as long as it is secure.

Here are some ideas to help you plan your design:

- How will you make sure your safe is tough to crack?
- Think of the size and shape of your safe. The thickness of the walls/doors.
- What will your safe be made of? Think of different types of strong reliable material such as plastics and metals. Will you make your safe fire resistant?

## Security tips

Safes have various high security features to ensure maximum security. What features will you use for your safe?

Possibly security features:

- Combination locks
- Strong steel doors/bolts

- Digital password access
- Finger/eye scanning
- Voice recognition

Will you be imaginative and adapt one of the features listed above, or perhaps devise some more original features. Maybe your safe will consist of multiple devices for ultimate security.

Have fun!
