1. Introduction

1.1 This supervisory statement (SS) sets out the Prudential Regulation Authority's (PRA) expectations of credit unions. It applies to all UK credit unions as defined in the Credit Unions Part of the PRA Rulebook.

1.2 This SS seeks to advance the PRA's statutory objective of promoting the safety and soundness of the firms it regulates by setting out the PRA's expectations of how credit unions should comply with core elements of the regulatory framework contained in the Credit Unions Part of the PRA Rulebook.

2. Capital

2.1 A credit union will be expected to maintain the relevant minimum capital requirement specified by rule 8.5 of the Credit Unions Part of the PRA Rulebook at all times. The PRA also expects credit unions to consider whether additional capital should be held above the minimum in order to meet the requirement in rule 8.1 of the Credit Unions Part of the PRA Rulebook. For example, credit unions that are growing rapidly, providing mortgages, or corporate loans should consider holding additional capital in light of the additional risks to which they are exposed. A credit union providing credit cards would be expected to consider what additional capital is required in order to cover potential claims arising from Section 75 of the Consumer Credit Act 1974.

2.2 Credit unions should expect that the PRA may impose an additional capital add-on (ie via the PRA's own initiative powers, as provided by section 55M the Financial Services and Markets Act 2000 ('FSMA') 'own initiative requirements' or 'OIREQ'), where there are specific risks present in a credit union (examples might include credit unions with high risk business models, high arrears, or governance concerns) and where a credit union has not taken up the PRA's invitation to apply for a 'voluntary requirement' (VREQ) as provided by section 55M of FSMA.

2.3 A credit union is expected to notify the PRA immediately should it become aware that it is likely to fall below its relevant minimum capital requirement. It must comply with the immediate notification requirement in rule 8.6 of the Credit Unions Part of the PRA Rulebook if its capital falls below the relevant minimum.

2.4 Where a credit union's capital ratio is below 5%, the PRA expects it to engage more fully with the PRA. In particular, the PRA will expect a credit union to engage on its ongoing sustainability and the PRA will challenge it to demonstrate its ability and capacity to produce, work to, and monitor a viable business plan. As part of that discussion, the PRA will expect it to engage on whether it has a viable future and if not, what plans it has to close in an orderly

fashion, which could be by way of insolvent wind-up, solvent wind-down, or the transfer of its engagements to another credit union.

Quality of capital

2.5 Capital acts as a cushion to absorb unexpected losses, for example if members fail to repay their loans, or losses arise from fraud or operational incidents. Broadly speaking, for most credit unions, capital predominantly comprises of retained earnings (reserves). This capital is considered high quality capital (ie highly loss-absorbing) as it does not have any features that make it less able to absorb losses, such as a principal that needs to be repaid or a requirement to pay non-discretionary distributions.

2.6 Credit unions have limited access to a wider range of capital instruments; their capital may also comprise of deferred shares, subordinated debt, and revaluation reserves (see rule 8.2 of the Credit Unions Part of the PRA Rulebook).

2.7 External capital investment (in the form of subordinated debt or deferred shares) can be important in supporting a credit union's growth, particularly in the early years when a credit union is first established, to help it recover from financial shocks in the short term and to support growth plans or the expansion of services in a sustainable manner.

2.8 Subordinated debt is considered lower quality capital given the principal needs to be repaid (which carries refinancing risk) and coupons (the annual interest payments) are paid to service the debt rather than being returned to members as dividends.

2.9 Deferred shares, while they do not carry refinancing risk, usually carry a perpetual coupon although in some cases this can be discretionary and non-cumulative.

2.10 However, the PRA holds concerns that the use of material amounts of subordinated debt and interest-bearing deferred shares could have the potential to threaten the sustainability of a credit union if not used appropriately and prudently. Credit unions utilising such instruments must be able to demonstrate they are acting in the best interests of members, particularly if the capital arrangements mean that operating profit is in a large part used to service the capital coupons rather than serving as returns to members. Credit unions should carefully plan their approach to such instruments with a view to operational sustainability and viability.

2.11 The PRA expects credit unions utilising such instruments to manage the associated risks: for example, the refinancing risk of subordinated debt and the perpetual nature of a coupon attached to deferred shares. For the avoidance of doubt, a credit union should not raise external capital in order to service capital coupons.

2.12 There is also concern regarding potential conflicts of interest arising from externally-influenced business models. Capital sourced from third parties should not have conditions attached that give preferential treatment to the third party. Credit unions should ensure that any potential conflicts of interest arising from the provision of capital are managed adequately.

2.13 For credit unions with total assets over £50 million, the PRA expects them to not hold more than 50% of their minimum capital requirement as subordinated debt; and that no more than 75% of the minimum capital requirement be comprised of subordinated debt and interest-bearing deferred shares. There may be circumstances where these limits may be exceeded. In such instances, the PRA would expect the credit union to provide sufficient details to satisfy supervisors of the credit union's arrangements for managing the associated risks before proceeding with their plans to raise external capital above these limits.

2.14 Factors the PRA will take into account when reviewing such plans are:

- (i) whether the capital arrangements provide investors with external influence over the credit union;
- (ii) evidence that the interest rate and liquidity risks are being managed adequately;
- (iii) the reasonableness and credibility of the credit union's plans for growth (including how it would service the capital investment through distributable profits as opposed to raising further capital to pay coupons);
- (iv) whether the credit union is contractually able to defer coupon payments and/or whether such payments are cumulative;
- (v) whether the investment (for example, the rate of interest offered) represents a reasonable and justified risk-reward proposition; and
- (vi) whether the credit union has provided a robust and credible plan for reducing reliance on external capital investment.

2.15 The capital instruments should not have any features that hinder recapitalisation such as provisions that require the issuer to compensate investors if a new instrument is issued at a lower price during a specified timeframe.

3. Liquidity

3.1 Rule 10.5 of the Credit Unions Part of the PRA Rulebook requires that credit unions must establish, implement, and maintain an up-to-date liquidity management policy statement approved by the governing body. Rule 9.4 of the Credit Unions Part of the PRA Rulebook requires that the amount and composition of liquid assets held by a credit union must be prudent and appropriate to the nature, scale, and complexity of its business, having regard to material risks, including the risk of a sudden adverse cash flow.

3.2 The PRA therefore expects a credit union's strategy for liquidity management, which should be set out in the liquidity management policy statement, to take account of the nature, scale, and complexity of the credit union. As part of this, it is expected that consideration should be given to the credit union's strategic plan, risk profile, and the current economic environment. The liquidity management policy statement is also expected to cover:

- the roles and responsibilities of officers involved in liquidity management;
- the quantity and quality of liquid assets to be maintained by the credit union over time, taking into account the minimum liquidity requirements in rule 9.2 of the Credit Unions Part of the PRA Rulebook; and
- procedures for complying with regulatory requirements, including monitoring and reporting against internal targets and regulatory ratios to the board.

4. Additional activities and membership size

4.1 A credit union that is undertaking 'additional activities'¹ (see Table 1) or that has more than 15,000 members, and is therefore subject to the requirement in rule 10.3(3) of the Credit Unions Part of the PRA Rulebook, is expected to monitor its relevant business by using the ratios in paragraph 4.3 below, calibrated with values that are specifically aligned to its individual business model. Credit unions should have measures that help them define their tolerance for triggers and ratios that underpin their resilience. The ratios in table 1 below are indicative; the PRA expects boards to assess what is most important and reflects the risks in their organisation. The PRA expects the values selected by the credit union to provide an accurate and reliable business tool, by which its board may routinely and accurately monitor the credit union's performance against its strategic plan and its regulatory obligations. The PRA also expects the credit union to be able to provide details of its chosen ratios, and evidence of the rationale underlying them, on request.

4.2 The PRA expects such a credit union to review performance against its target ratios at least monthly, and to satisfy itself that performance is consistent with maintaining a business that is viable over a 12-month period and sustainable over a 36-month period.

¹ 'Additional activity' means (1) an additional activity carried out or additional service provided by a credit union as described in rule 3.3, rule 3.5, Chapter 4, rule 6.4, or Chapter 7 of the Credit Unions Part of the PRA Rulebook, (2) entering into a conditional sale agreement, as the seller, with a member of the credit union pursuant to section 11E of the Credit Unions Act 1979; (3) entering into a hire purchase agreement, as the person from whom goods are bailed or (in Scotland) hired, with a member of the credit union pursuant to section 11E of the Credit Unions Act 1979; (4) providing credit cards; or (5) lending to corporate members.

4.3 By way of example only, the PRA considers that prudent practice suggests that the indicative ratio percentages for credit unions that undertake additional activities or have more than 15,000 members for all calculations save loans to assets are those outlined in Table 1.

Table 1: Indicative ratios for credit unions that undertake additional activities or have more than 15,000 members					
Ratio	Additional investments	Additional lending	Mortgages	Transactional accounts	Indicative ratio
Credit union's borrowings as percentage of total asset	Y	Y	Y	Y	≤5%
Total shares as percentage of total assets	Y	Y	Y	Y	≥70% and ≤90%
Total bad debt written off as percentage of total loans		Y	Y	Y	≤10%
Net assets as percentage of sum of total shares and juvenile deposits		Y	Y	Y	≥105%
Bad debt (more than three months in arrears) as percentage of total loans	Y	Y	Y	Y	≤20%
Non-earning assets as percentage of total assets	Y	Y	Y	Y	≤10%
Net zero cost funds as percentage of non-earning assets	Y	Y	Y	Y	≥200%
Loan income over 12 months as percentage of total loans		Y	Y	Y	≥6%
Net loans as percentage of total assets			Y	Y	Deliberately left blank

4.4 Table 2 sets out the PRA's definitions of the terms set out in Table 1 for the purposes of the ratio calculations.

Table 2: Definitions for ratio calculations

Term	Definition
Total assets	The total assets of a credit union that appear on its balance sheet.
Borrowings	The total closing balances of all loans received by a credit union (excluding any subordinated loans), authorised overdrafts, and committed lines of credit.
Total shares	The total amount of money held by a credit union, at the relevant date, relating to shares paid in by members, including money held for deferred shares.
Net loans	The total amount outstanding at the relevant date on all loans to members (irrespective of when such loans were made) less provision for bad and doubtful debt.
Net liquid assets	Assets which can be realised for cash at short notice, and within at most eight days, less any liabilities payable within 30 days.
Bad debt	Total amount of loans to members where the loan is more than three months in arrears.
Total loans	The total amount outstanding at the relevant date on all loans to members (irrespective of when such loans were made). This includes any loans written off during the period.
Net assets	Total assets less liabilities (excluding members' shares and juvenile deposits).
Juvenile deposits	The total amount due to juvenile depositors.
Non-earning assets	The total amount of cash, current account balances (excluding any balances earning interest), pre-paid expenses, and fixed assets.
Net zero cost funds	The total sum of a credit union's capital and liabilities excluding any liabilities that are subject to interest payable by or charges to the credit union. In practical terms, this is likely to only constitute a credit union's reserves. (In general, shares are excluded as most credit

	unions pay a dividend on shares if they make a profit and any interest-bearing shares or juvenile deposits should be excluded).
Loan income	The total amount of interest received on loans made to members during the 12-month period preceding the relevant date.

4.5 Where a credit union is experiencing significant growth of members, the PRA expects the credit union to consider the risks associated with increased membership and, where appropriate, take steps to address those risks. This should include consideration of operational risks such as those in Chapter 10 (for example, whether systems are capable of managing additional capacity, whether the credit union has sufficient staff to cope with the increasing demand), and whether any changes need to be made to update their processes and procedures.

5. Maximum deposit levels

5.1 When a credit union gives notice in accordance with rule 2.3 of the Credit Unions Part of the PRA Rulebook, it will be expected to inform the PRA of its current loans to assets, capital, and liquidity ratios. It will also be expected to provide the PRA with details of the proposed use of the funds to be deposited and to confirm that its single customer view file is complete and up-to-date. The credit union is expected to satisfy the PRA that its acceptance of such a deposit would be prudent.

5.2 The PRA expects that any credit union that intends to issue fixed-rate shares or deposits complies with the statutory mandatory requirements that must be satisfied before beginning such activity.²

5.3 Credit unions that wish to offer shares in an Individual Savings Account (ISA) tax-free wrapper are expected to refer to the relevant regulations issued by HM Revenue and Customs (HMRC). Credit unions should be aware that approval from HMRC does not provide any degree of exemption from compliance with the statutory requirements referred to above in paragraph 5.2.

² These requirements are set out in section 7A (1) of the Credit Unions Act 1979.

6. Lending

6.1 The PRA expects all credit unions to pay close attention to the quality of their underwriting of loans, whether unsecured or otherwise. Credit unions are expected to apply a consistent lending policy in making all credit decisions, and to retain records of such decisions for at least the life of the loan in question.

6.2 Where a credit union proposes to undertake fixed-rate lending (including mortgage lending), the PRA expects the credit union to be able to demonstrate, on request, that it has a thorough understanding of any risks that this activity may create, particularly interest rate and basis risk. In some circumstances (for example where a credit union has a material fixed-rate lending book), the PRA may engage with the credit union as to whether any fixed-rate lending for periods of more than two years should be reported using form FSA017.³ Where a credit union's fixed-rate lending exposes it to specific material prudential risk it will be expected to make sufficient additional capital provision to mitigate such risk.

7. Investments

7.1 The PRA expects that the assessment required by rule 6.5 of the Credit Unions Part of the PRA Rulebook will be proportionate to the complexity, or otherwise, of the proposed investment. As part of the assessment, the PRA expects a credit union to consider counterparty risk.

7.2 Additional expectations relating to investments for credit unions with more than £10 million in assets and credit unions that invest in more complex investments (supranational bonds, corporate bonds, bank bonds, and money market funds) are set out in Chapters 11 and 14, respectively. Credit unions undertaking additional activities⁴ are also expected to maintain a board-approved investment policy (see paragraph 14.2 in Chapter 14).

8. Governance and organisation

8.1 The PRA considers that good governance is fundamental to the safety and soundness of all financial institutions. Accordingly, all directors are expected to fully understand their individual and corporate responsibilities and, in the context of the size and complexity of each individual business, to have the technical competence necessary for them to set, and to

³ [FSA017 – Interest rate gap report](#).

⁴ See footnote 1 for additional activities.

oversee, the strategy of their credit union. All directors will be expected to understand the risks inherent in their credit union's business model and to exercise appropriate oversight of the management of those risks. The PRA recognises that in applying these principles credit unions will take an approach that is proportionate to their size, complexity, and resources.

8.2 The following are indicators of good practice (the PRA considers that some credit unions will be limited in their ability to implement these practices, due to their size and resources, but the PRA would generally expect credit unions with more than £10 million in total assets to meet all or most of the below):

- there is a clear separation between the role and responsibilities of the General Manager/ Chief Executive Officer (CEO)/Senior Management Team (largely operational (although the General Manager/ CEO also plays a key role in developing strategy) keeping the board informed, and bringing recommendations to the board) and that of the board (largely strategic, approving key policies, making key decisions, overseeing performance, and appraising the CEO);
- the board demonstrates a clear understanding and ownership of strategy and associated risks, focusing on this as a key agenda item at board meetings (rather than getting involved in operational detail);
- the board has an appropriate range of skills and experience relevant to the activities carried on by the credit union;
- the credit union carries out an analysis of skills gaps, and prioritises identified gaps when recruiting replacements and buys in external expertise as necessary;
- the board is provided with management information which clearly indicates the credit union's financial position and whether key financial measures are being met with reference to the board's risk appetite;
- the CEO/General Manager has formal objectives which they are assessed against, via a formal appraisal process, led by the Chair (this is separate to ongoing obligations under the Senior Managers and Certification regime and should not cause the credit union to duplicate any assessments they are already doing);
- a formal assessment of the board, both individually and collectively, is carried out annually, led by the Chair;
- a formal assessment of the Chair is carried out annually (for example, by another board member such as the Vice-Chair); and
- the board maintains a succession plan that addresses the unexpected loss of key individuals.

8.3 All directors, without exception, are expected to ensure that their credit union fully complies with the requirements of the Financial Services Compensation Scheme (FSCS), and that their credit union's provisioning policy and practices are prudent and effective. The PRA expects that directors of all credit unions, irrespective of size and complexity, will ensure that the credit union complies with the Fundamental Rules within the PRA Rulebook, by

maintaining its single customer view file accurately and in a form agreed by the FSCS at all times.⁵ The PRA expects that directors of all credit unions will ensure that the credit union complies with rules relating to the maintenance of an accurate Single Customer View and Exclusions View as set out in the Depositor Protection Part of the PRA Rulebook. This includes ensuring that credit union software is updated as necessary.

8.4 The PRA expects that directors understand that all outsourcing arrangements are commercial, business decisions, and that sole responsibility for ensuring operational continuity and data security, among other things, rests with the individual credit union.

8.5 The PRA expects that all directors regularly satisfy themselves that their credit union accurately complies with the provisioning requirements in rules 3.11 and 3.12 of the Credit Unions Part of the PRA Rulebook.

8.6 For a broader overview and more detailed good governance examples, credit unions may wish to review the [UK Corporate Governance Code](#).

Business plan and forecasts

8.7 Credit unions must maintain an up-to-date business plan approved by the board (rule 11.7 of the Credit Unions Part of the PRA Rulebook). The plan should be fit-for-purpose, and the detail provided commensurate with the size and complexity of the credit union. The PRA expects that the business plan should include (at a minimum):

- clear and measurable objectives for the next three years, which include realistic targets for the year in question (eg in respect of loans, savings, and arrears) to measure performance against;
 - plausible financial forecasts (income and balance sheet) extending to at least two years beyond the current financial year. It is best practice for this to include reasoned and explicitly stated underlying assumptions (eg Bank of England Base Rate) and a coherent strategy for achieving the objectives; and
 - a robust plan for delivering the strategy which contains, among other things, an assessment of the current and emerging risks attached to the credit union's business and operations and the impact of actual and anticipated external developments.

8.8 The business plan should be regularly updated and reviewed. Progress against business plan targets should be discussed regularly by the board, variances analysed and, where appropriate, pre-emptive or corrective action taken to deliver the business objectives.

⁵ [Fundamental Rule 8](#) is particularly relevant.

8.9 Credit unions are expected to inform their PRA supervisors ahead of undertaking any significant diversification of, or change to, their business model. The PRA expects a credit union to engage with it on the risks and benefits of the proposed diversification, financial projections before and after the diversification, and stress tests of those projections, based on severe, but plausible, scenarios. Examples of what the PRA would consider to be significant changes to a business model include providing new loan products such as corporate loans or issuing interest-bearing shares to raise deposit funding. Examples of what the PRA would not consider to be a significant change to a business model include different branding for small unsecured personal loans.

9. Risk management

9.1 Credit unions should have proportionate risk management systems, adequate for the needs of their business. Where there is evidence of poor risk management and/or governance at a credit union, the credit union should expect the PRA to engage with it on its mitigation plans. Where the credit union fails to engage or make meaningful progress, it should expect the PRA to engage more fully on whether it has a viable future and, if not, what plans it has to close in an orderly fashion. This could be by way of insolvent wind-up, solvent wind-down, or the transfer of its engagements to another credit union.

Internal audit function

9.2 Credit unions are required to establish and maintain an internal audit function under rule 15.1 of the Credit Unions Part of the PRA Rulebook. The PRA expects the internal audit function⁶ of a credit union to act as a forward-looking tool of risk management and control (taking into account the nature, size, and scope of the credit union's activities). The PRA expects the internal audit function to be independent from management, report to the board, and be capable of providing robust advice to the board, in particular where material business and regulatory risks are being run. The PRA considers indicators of good practice include:

- internal audit function checks go beyond basic operational checks; for example, the internal audit function carries out checks to assess the soundness of the credit union's governance checks (examples include but are not limited to, observations of board meetings to determine whether there is comprehensive strategy-setting process, whether the board considers all matters of material relevance and documents the

⁶ The PRA acknowledges that many credit unions will in effect utilise their supervisory committee to fulfil this function. The PRA rules make reference to an internal audit function rather than a supervisory committee and as such that terminology is repeated here. It is for credit unions and their boards to consider how they meet applicable rules and guidance and whether their supervisory committee fulfils their needs.

reasons for its decisions, checks of the board minutes to ensure actions are carried out);

- the internal audit function provides sufficient challenge to the board; and
- the internal audit function is sufficiently independent from the board. The PRA expects that where the credit union outsources its internal audit function, it does not engage its external auditor for that purpose unless in exceptional circumstances and, if it does so, only for the minimum practicable period.

9.3 The PRA expects credit unions with total assets of more than £10 million should be able to meet all of the above expectations. Boards of smaller credit unions may use other means to satisfy themselves that their internal audit function is operating adequately.

10. Operational risk and resilience

10.1 Rule 17.1 of the Credit Unions Part of the PRA Rulebook requires a credit union to put in place contingency arrangements to ensure it could continue to operate and comply with its regulatory obligations in the event of an unforeseen interruption, such as a complete failure of information technology systems or destruction of premises by fire, which would otherwise prevent the normal operation of the credit union. Operational risk is the risk of direct or indirect loss resulting from inadequate or failed internal processes, people, and systems or from an external event. Examples include the risk of losses arising from the following:

- internal/external fraud – this may arise from lack of adequate security of information systems as well as credit union officers, assets, and systems (including cyberattacks);
- damage to physical assets;
- business disruptions and information system failures – this includes hardware and software failures, telecommunication problems, and utility outages;
- execution, delivery, and process management failures –this includes transaction and execution errors arising from human error, lack of resources, skills, training, policies, procedures, or poor management;
- failure of an outsourcing or a third party service provider;
- legal risk –this includes failure to meet legal, contractual, and other obligations (including exposure to fines, penalties, or damages); and
- member, product, and business practices – this includes unintentional or negligent failure to meet obligations to specific members (including fiduciary and suitability requirements), or from the nature or design of a product.

10.2 The PRA's expectations for operational risk management should apply proportionately according to the scale and nature of the credit union. The PRA expects all credit unions to consider the operational risks they are exposed to, and to have mitigating policies and procedures in place to manage them appropriately. As part of this, credit unions may

consider, as evidence of good practice, the Basel Committee on Banking Supervision document on [Principles for the Sound Management of Operational Risk](#).

10.3 The PRA expects governance and oversight arrangements for operational resilience to be in place. All credit unions must test the business continuity arrangements regularly (under rule 17.1 and rule 17.2 of the Credit Unions Part of the PRA Rulebook). The PRA expects business continuity arrangements to be reviewed at least annually.

Notifications

10.4 The PRA expects to be notified, in advance of material operational changes and/or a credit union entering into any material outsourcing agreements. Credit unions are expected to ensure they have appropriate governance, risk management, and mitigation in place in advance of the material operational change or material outsourcing including, where relevant, communications to affected members. Plans for exiting from the material operational change or material outsourcing agreement and contingency plans should also be included. This could be a simple plan, depending on the complexities involved and materiality of the services impacted, and should not require material additional costs and resources to develop. The PRA considers failed or poorly implemented operational changes have the potential to cause significant disruption to credit unions, including interruption to critical services, often with an immediate impact on members relying on these services.

10.5 Examples of material operational changes that the PRA would expect to be notified of include the replacing of core banking systems, material change of or new relationship with third party critical service suppliers (including Cloud suppliers and payment systems providers), digital transformation programmes, and data centre migrations. Where a credit union is unclear on their notification expectations, it should discuss this with the PRA.

11. Additional expectations for credit unions with more than £10m in assets

Investments

11.1 The PRA expects credit unions with more than £10 million in total assets, and any credit unions that hold investments that come under rules 6.4(7) and 6.4(8) of the Credit Unions Part of the PRA Rulebook, to adhere to the following concentration limits (in addition to the

limits required by rule 6.4A of the Credit Unions Part of the PRA Rulebook,⁷ and with the exception of the investments listed in paragraph 11.2):

- no more than 20% of a credit union's total investments⁸ to be held with a single counterparty; and
- an amount equivalent to no more than 75% of credit union's total capital to be held with any single counterparty.

11.2 The PRA considers that the above concentration limits set out in paragraph 11.1 would not apply to the following investments:

- sterling-denominated securities issued by the UK government, or a fixed-interest sterling-denominated security guaranteed by the UK government with a maturity of up to five years from the date on which the investment is made (under rules 6.3.3, 6.3.4, 6.4.3, and 6.4.4 of the Credit Unions Part of the PRA Rulebook);
- deposits placed with a credit institution which is authorised in the UK to accept deposits on terms that the deposit shall be repayable within at most 12 months from the date on which the investment is made (under rule 6.3 (1) of the Credit Unions Part) and rated A-AAA by at least two credit rating agencies registered with the FCA; and
- UK bank bonds which have a maturity of up to five years from the date on which the investment is made (under rule 6.4 (6) of the Credit Unions Part) rated A-AAA by at least two credit rating agencies registered with the FCA.⁹

11.3 When the credit rating of an investment (or a relevant credit institution that holds the investment) that falls under the categories in paragraph 11.2 changes so that it no longer meets the required credit rating, a credit union would be expected to move funds as appropriate to ensure that they meet the limits set out in paragraph 11.1. The PRA does not expect a credit union to break a term deposit to meet the limits set out in paragraph 11.1.

11.4 Where a credit union's existing investments exceed the concentration limits in paragraph 11.1, the PRA would not expect a credit union to break existing investment contracts to bring them into line with the expected limits. Rather, when investments mature the PRA expects credit unions to ensure that new investments made are compliant with the limits in paragraph 11.1.

⁷ This means that the 5% cap on corporate bonds overrides the 75% limit set out in paragraph 11.1.

⁸ Total investments refers to surplus funds a credit union has invested in line with the requirements of rules 6(3) and 6(4) of the Credit Unions Part of the PRA Rulebook.

⁹ Although we consider the scenario unlikely, a credit union should not invest surplus funds into a bond issued by a counterparty for the purposes of raising capital / meeting its MREL requirement.

11.5 It is best practice to spread funds out where practicable and before making investment decisions, credit unions should remain mindful of the importance of not creating excessive time band or counterparty concentrations in line with credit unions rule 6.5(4).

11.6 Credit unions investing their surplus funds are required to consider and document their decisions and account for counterparty, concentration, liquidity, and interest rate risk under rules 6.5 and 6.6 of the Credit Unions Part of the PRA Rulebook. When making investment decisions, the PRA expects credit unions to carefully consider the risk return trade-off and to ensure investment decisions reflect the credit union's risk appetite. Credit unions should consider setting exposure limits for different counterparties based on their risk profile, as part of their risk appetite statement.

11.7 Credit unions should be mindful of the need to meet liquidity expectations, in particular the additional liquidity expectations where credit unions invest in more complex investments (see Chapter 14). In order to help credit unions manage their liquidity in the face of unexpected outflows, and in line with rule 6.5 of the Credit Unions Part of the PRA Rulebook, the PRA expects credit unions to ensure that an adequate proportion of its investments are able to be broken before the end of the term is reached (even if a fine is incurred).

11.8 The PRA considers that the limits in paragraph 11.1 would not apply to funds held temporarily in an account before an investment decision is made.

Liquidity

11.9 For credit unions with more than £10 million in assets, the PRA also expects the liquidity management policy statement to cover:

- the credit union's strategy, processes, and systems in place for liquidity risk management;
- the liquidity risk appetite agreed by the board;
- any liquidity buffers to be maintained as a safeguard on the basis of stressed conditions that may arise;
- plans to address any liquidity or funding risks arising from mismatches in maturity (which can give rise to cash flow imbalances and a risk that there could be insufficient cash resources to meet payment outflows when they fall due); and
- contingency plans with actions that will be taken if liquidity targets are not met.

Risk management

11.10 Rule 11.1(2) of the Credit Unions Part of the PRA Rulebook requires credit unions to establish, implement, and maintain effective processes to identify, manage, monitor, and report the risks it is, or might be, exposed to. Rule 11.2 requires that these processes are comprehensive and proportionate to the nature, scale, and complexity of the risks inherent in

its business model and activities. In line with these requirements, the PRA expects all credit unions with more than £10 million in assets to maintain a risk appetite statement (RAS). This should:

- include clear, objective and, where appropriate, quantitative measures which the whole board has approved;
- be explicitly connected to the business objectives, and accurately reflect the credit union's specific risk appetite (including articulation of the threshold at which it would consider taking management actions against each risk); and
- be used proactively by the board to inform the strategy and business plan, and ensure the board's decisions are compliant and consistent with, aligned to and not in excess of, the board's risk appetite.

Operational risk and resilience

11.11 In addition to the expectations set out in Chapter 10, the PRA expects credit unions with more than £10 million in assets to consider and document the core systems and outsourcing arrangements that are critical to the operation of the business.

12. Additional expectations for credit unions with more than £50m in assets

Liquidity

12.1 In order to ensure a credit union is holding sufficient liquid funds under Credit Unions 9.4, the PRA expects credit unions with more than £50 million in total assets to carry out periodic (at least annual) liquidity stress testing whereby the impact of stressed outflows is considered.

12.2 The liquidity stress testing expectation referred to in paragraph 12.1 could be met by the credit union's own analysis, which is based on a clearly articulated RAS (see paragraph 10.1) defining the duration and type of stress or stresses that the credit union aims to survive. The PRA expects the stress tests to consider the impact of a range of severe, but plausible scenarios (including combined scenarios). Credit unions should expect the PRA to engage with them on the method used and assumptions made, eg their assessment of the likely run-off of different elements of the retail book.

12.3 For illustrative purposes, liquidity stress testing referred to in paragraph 12.1 could be met by calculating (total cash + assets that can be realised for cash within eight business days)/total net cash outflows over 30 calendar days, where:

- Total net cash outflows = total expected cash outflows – total expected cash inflows (or 75% of total expected outflows, whichever is greater)
- Total expected cash outflow = (FSCS covered deposits [excluding internet deposits] *5% withdrawal rate) + ([uncovered deposits and internet deposits] *10% withdrawal rate).
- Total expected cash inflow= contractual inflows (ie loan and mortgage payments) expected over 30 day period that are fully performing.

12.4 The above calculation would be expected by the PRA to be more than 100%. Credit unions may use contractual outflows/ inflows and behavioural flows in their calculations. Credit unions should be able to clearly explain their rationale to the PRA.

Risk management

12.5 In addition to the expectations set out in Chapters 9 and 11, credit unions with more than £50 million in total assets and/or credit unions that carry out more complex lending (such as providing mortgages or lending to corporates), and/or credit unions that invest in more complex investment products (supranational bonds, corporate bonds, bank bonds, and money market funds) should expect to engage more with the PRA. The PRA expects these credit unions to undertake scenario analysis to identify the impact of key strategic initiatives and external risks on their businesses. Examples of scenarios a credit union may use include: poorer than expected loan book performance; greater than expected increase in shares, higher than expected arrears, changes to welfare benefits, changes in bank interest rates etc. The PRA considers it good practice to look at combined scenarios.

Operational risk and resilience

12.6 In addition to the expectations set out in Chapters 10 and 11, the PRA expects credit unions with more than £50 million in assets to consider and document:

- the people, processes, and technology required to deliver critical services;¹⁰ and
- what scenarios could result in them exceeding their risk appetite, and what actions they will take to respond and react to instances of crystallised operational risk to ensure they remain within their risk appetite. This should include consideration of external disruptions, and where the disruption is initiated at a provider whose products or services support the credit union's critical services.

¹⁰ From the PRA Glossary: Critical services 'means activities, functions or services performed for one or more business units of the firm or for the firm and another member of its group, whether by the firm itself, any other group member or a person outside the firm's group, the failure of which would lead to the collapse of or present a serious impediment to the performance of the firm's critical functions.'

13. Additional expectations for credit unions with more than £100m in assets

Exit strategy planning

13.1 In line with requirements under rule 11.1(2) of the Credit Unions Part of the PRA Rulebook, for a credit union to have effective processes to identify, manage, monitor, and report the risks to which it is exposed, the PRA expects a credit union with more than £100 million in assets to be able to demonstrate that it has management information, monitoring, and governance processes to support timely wind-down decision making. As part of this, it is best practice for a credit union to consider the scenarios that could lead to it no longer being viable.

13.2 Credit unions with more than £100 million in assets are expected to consider the steps and resources needed to (i) wind down, and (ii) achieve a transfer of engagements, while, to the extent possible, avoiding any negative effects on members. These credit unions are expected to evidence that they have evaluated the risks and impact of a wind-down or transfer and considered how best to mitigate them.

14. Additional expectations for credit unions that wish to invest in more complex investments

14.1 Credit unions that invest in more complex investments under rules 6.4(7) and 6.4(8) of the Credit Unions Part of the PRA Rulebook are expected to adhere to the investment expectations set out in Chapter 11 (paragraphs 11.1-11.6).

14.2 The PRA expects credit unions undertaking additional activities and/or credit unions investing in more complex investments (supranational bonds, corporate bonds, non-UK bank bonds, and money market funds) to maintain a board-approved investment policy. This should:

- set out organisational arrangements including the roles and responsibilities of officers involved in the credit union's investments;
- set out their strategy for managing investments, including:
 - the credit union's risk appetite;

- the characteristics of the investments the credit union will make including quality, counterparty, and maturity; and
- how the credit union will manage market risk including specifically listing institutions, issuers, and counterparties that may be used, or criteria for their selection, and limits on the amounts that may be invested with each;
- include the credit union's approach to assessing credit worthiness and counterparty risk and maintaining a diversified investment portfolio;
- consider liquidity and funding risks arising from maturity mismatch and consider if and when additional liquidity may be required; and
- be reviewed regularly (at least annually).

Liquidity

14.3 Credit unions that invest in more complex investments are expected to meet the liquidity stress testing expectations set out in paragraphs 12.1 to 12.4.

15. Additional expectations for credit unions that lend to corporate members

15.1 The PRA expects credit unions that provide loans to corporate members¹¹ should be mindful of the additional risks involved in providing corporate loans, for example business model risks, or difficulty predicting future cash flow.

15.2 Credit unions providing loans to corporate members are required to comply with the requirements in rule 10.3 of the Credit Unions Part of the PRA Rulebook. The PRA expects credit unions that have notified the PRA that they are undertaking corporate lending to:

- establish overall and individual limits for these loans (while noting the statutory limitation¹² that aggregate corporate loan balances must not exceed 10% of outstanding balances of all loans made). Separate limits should be considered for secured loans to corporate members;
- set a risk appetite (and limit) for these loans, agreed by the board. A separate risk appetite and limit for secured corporate loans should be considered;
- incorporate within monthly management information reports to the board, corporate lending levels (percentage of corporate loans that make up loan book and level of

¹¹ See section 5A of the Credit Union Act 1979 (Great Britain) or Section 14A of the Credit Unions (Northern Ireland) Order 1985 for the definition of corporate members.

¹² Limits on loans to corporate members are set out in the Credit Union Act 1979 and The Credit Unions (Northern Ireland) Order 1985.

arrears associated with corporate loans at a minimum), with separate reporting for secured corporate loans. This information should be reviewed by the board regularly; and

- conduct scenario analysis to consider the risks of not recovering funds (for example, looking at the impact of a number of corporate loans defaulting at the same time).

15.3 Where a credit union undertakes secured loans to corporate members, the PRA may seek additional information from the credit union on the nature of its lending to corporate members, including:

- a quarterly review of existing loans (including performance of the businesses); and
- whether/ how funds could be recovered –commercial property generally has a significantly higher default rate than residential mortgage lending, and the credit union should consider scenario analysis to determine the impact this could have on their business.

Liquidity

15.4 Credit unions that provide loans to corporate members are expected to meet the liquidity stress testing expectations set out in paragraphs 12.1 to 12.4.

16. Additional expectations for credit unions that provide consumer credit

16.1 Credit unions providing credit cards, hire purchase, and/or conditional sale are required to meet the provisions in rule 10.3 of the Credit Unions Part of the PRA Rulebook. The PRA also expects credit unions that provide credit card services to ensure:

- the board has sufficient knowledge and expertise regarding the risks involved; and
- a credit card policy is maintained which sets out (among other matters) how they would monitor and mitigate risks arising from the activity. This should include:
 - appropriate risk management arrangements, including monitoring metrics to provide effective oversight;
 - details of how the credit union is meeting its obligations with respect to outsourcing arrangements that apply to credit cards. For example, credit unions should be able to demonstrate that they are able to terminate outsourcing arrangements where necessary without detriment to the continuity of provision of services to members;¹³ and

¹³ See rule 14.5(7) in the Credit Unions Part of the PRA Rulebook.

- an assessment of how much capital is required to cover specific risks related to credit cards (for example claims arising under section 75 of the Consumer Credit Act 1974, or losses from fraud, issues with the payment systems, product design, mis-selling, incorrect interest charges); this should be clearly documented. Where a credit union fails to demonstrate that they have enough capital to cover such risks, PRA supervisors may consider imposing an additional capital add-on (see section 2 above on capital).

Liquidity

16.2 Credit unions that provide credit cards or enter into hire purchase or conditional sale agreements are expected to meet the liquidity stress testing expectations set out in paragraphs 12.1 to 12.4.

17. Additional expectations for credit unions that provide mortgages

17.1 Credit unions that provide mortgages are expected to consider the additional risks to which they are exposed, and put in place appropriate systems and controls to monitor and mitigate those risks.

17.2 In particular, it is good practice for credit unions that provide mortgages to:

- be able to evidence that they have given consideration to the relevant risks and put mitigating controls in place where they consider it appropriate. Risks to be considered include:
 - affordability risk profile including appropriate controls over interest only mortgages, to ensure that repayment of the loan principal at maturity is achievable;
 - accurate and verifiable assessment and valuation of security;
 - pricing of risk. Credit unions are expected to have risk pricing models that at a minimum take into account factors including information from the credit reference bureaux, the outcome of their internal stress testing, the underlying cost of funding the loan and the credit union Board's target return on capital; and
 - the risks inherent in different sub categories of mortgage lending (eg impaired credit, buy-to-let lending, self-build lending, shared ownership, lending in and into retirement, and commercial real estate lending).
- review their board-approved lending policy to ensure it is consistent with the risk appetite agreed by the board.

- put in place risk management controls that are appropriate and proportionate to the types of business undertaken.
- have in place lending limits set by reference to available management expertise and risk management capability.

17.3 In line with the requirements in rule 10.3 of the Credit Unions Part of the PRA Rulebook, credit unions providing mortgages should also be able to evidence that they have given consideration to key financial risks, and how they are managing and mitigating these. The key financial risks include:

- liquidity risks, arising from maturity transformation;
- funding risk, arising from the relative stability of different funding sources and reliance on new funding to replace outflows;
- wholesale counterparty credit risk interest rate risks;
- interest rate risks: a credit union that provides mortgages should have an adequate system for managing financial risks arising from fluctuations in interest rates. The PRA expects credit unions that have a fixed-rate mortgage book to be able to demonstrate that they are managing the interest rate risks adequately. The PRA expects such credit unions to discuss their approach for managing interest rate risk with their supervisor and share their plan; and operational risks in treasury and related activities.

17.4 Credit unions that provide mortgages are expected to have in place internal controls on treasury financial risk management (see rule 10.3 of the Credit Unions Part of the PRA Rulebook). As such, these credit unions should consider, as evidence of good practice:

- establishing a board-approved treasury management policy that governs all areas of treasury activities;
- the imposition of policy limits, set as part of the overall board policy. These are expected to confirm risk positions within levels considered by the board and management to be prudent, given the size, complexity and capital needs of the credit union;
- putting in place risk management systems and controls that are proportionate, and appropriate for the business they intend to undertake. This includes stress testing to evaluate the impact in income of abnormal market conditions, and board information reporting; and
- conducting an independent review of treasury activities, including adequacy of controls over maturity mismatch.

Liquidity

17.5 Credit unions that provide mortgages are expected to meet the liquidity stress testing expectations set out in paragraphs 12.1 to 12.4.

Commercial real estate (CRE) lending

17.6 Credit unions engaged in, or wishing to engage in, commercial real estate lending should be mindful of the different nature of the risks associated with this activity. For example, commercial property will generally require different valuation skills to residential housing and has a significantly higher default rate. As such, the PRA expects credit unions undertaking or considering undertaking this activity to carefully consider the associated risks and be able to evidence that they have adequate risk controls in place.

18. Credit unions that use or own Credit Union Service Organisations (CUSOs)

18.1 Under rule 6.3(6) of the Credit Unions Part, credit unions are permitted to invest in CUSOs. CUSOs are entities that are owned (or part owned) by one or more credit unions and provide shared ancillary services exclusively to credit unions (or other mutual societies that have a Part 4A permission and are regulated by the FCA and PRA)¹⁴ and their members.¹⁵ Credit unions that invest in or, (where relevant) use CUSOs, are expected to meet the expectations set out in this chapter.

18.2 In meeting the expectations set out in this chapter, credit unions will need to keep in mind the legislative prohibition on subsidiaries (this prevents a credit union owning a majority ownership of a subsidiary or a controlling interest in a subsidiary) set out in the Credit Unions Act 1979. There is no such restriction on Northern Irish Credit Unions. Credit unions should also be mindful of other legal obligations, such as competition law when considering shared arrangements involving other industry participants.

18.3 Properly governed and operated, CUSOs can have an important role in facilitating credit union growth and ensuring their sustainability. However, there are a number of risks inherent to CUSOs which need to be properly managed including reliance on third parties without adequate governance and controls, movement of activity to non-supervised entities, the creation of single points of failure and step-in risk.

¹⁴ Mutuels without a Part 4A Permission (eg non financial mutuels and Co-operative and Community Benefit Societies that do not have a Part 4A permission) are not included within the definition.

¹⁵ The types of services that a CUSO may offer may include administrative, professional, trade body, management, technology, collection, human resources services and any other similar services. Although by this definition, credit union trade associations may be considered to be CUSOs, the PRA does not consider the expectations in this chapter to apply to trade associations given the different nature of their activities and services. The services provided by a CUSO are not regulated activities.

Investing in a CUSO

18.4 The PRA expects credit unions wishing to invest in a CUSO to engage the PRA at an early stage in the process.

18.5 Before investing in a CUSO the PRA expects a credit union to carry out appropriate due diligence (and be able to evidence that they have carried this out). In particular, in advance of investing in a CUSO, the credit union should provide to the PRA:

- a description of the intended governance (noting that we would expect at least one CUSO director to be from a credit union owner), management and staffing, and services that the CUSO will provide (noting that CUSOs should only provide products and services that are in the interests of credit union members (and/or members of other regulated mutuals) and related to the services provided by those entities);
- a description of how the CUSO will be funded, including initial investment and ongoing investment commitments; and
- a description of how the credit union has satisfied itself that the credit union's liability is limited to the amount invested (as per paragraph 18.7 below).

18.6 The PRA may also seek assurance (and may ask for evidence) that the credit union has, before investing in a CUSO, or, establishing a CUSO:

- oversight of the CUSO's business plan;
- established clear reporting structures and performance reviews to maintain accountability;
- established risk identification procedures and has undertaken a risk assessment (including business continuity risk assessment, assessment of financial risk, operational risk, business model risk, governance and management risk, outsourcing risk and substitutability risk); and
- a clear view of the proposed exit strategy and termination processes.

18.7 Where a credit union intends to invest in a CUSO alongside another entity that is not a credit union, the PRA expects that:

- the credit union should be able to evidence what due diligence they have carried out on the other CUSO partners;
- credit unions should consider negotiating shareholder agreements that preserve strategic control and ensure transparency in decision-making;

- credit unions should ensure that they are meeting the credit union objects (including use and control of members savings for their mutual benefit) under the relevant legislation when making decisions in relation to the CUSO;¹⁶ and
- credit unions should consider introducing a conflict of interests policy to document how they would manage risks occurring from misalignment of interests (commercial priorities diverging from the credit union member focused ethos).

18.8 Where a credit union invests in a CUSO and the CUSO will provide services to mutuals (or their members) that are not credit unions, the PRA expects:

- credit unions to ensure that the CUSO remains focused on activities/entities that share the member owned mutual ethos;
- credit unions to ensure that they are meeting the objects under the relevant legislation and consider introducing a conflict of interests policy to manage diverging priorities (as set out above); and
- credit unions should consider undertaking a risk assessment of expanding the scope of the CUSO in this way and having a formal risk framework in place to monitor and manage the risks.

Limiting the liability of the investing credit union

18.9 The PRA expects credit unions investing in a CUSO to ensure that the liability of an investing credit union is limited to the amount that they have invested (ie to ensure that a credit union is not using its funds to prop up a failing CUSO). Accordingly, the PRA expects:

- where a credit union uses its own capital to fund the investment, the amount a credit union invests in one or more CUSO(s) should be no more than 7.5% of its total capital (as held immediately prior to investment).
- in certain circumstances investments may exceed the 7.5% limit (for example one off set-up costs), however, in such cases the PRA would expect the credit union to engage with the PRA on their rationale for exceeding the limit, their plan to mitigate any associated risks and the timeline to bring them into compliance. In assessing whether the investment may exceed the 7.5% limit, the PRA may take into account, the financial position (including amount of capital held in excess of requirements), risk management and governance of the credit union, the CUSO, and partner owners of the CUSO.

¹⁶ The objects under the Credit Union Act 1979 are: 1(3): (a) the promotion of thrift among the members of the society by the accumulation of their savings; (b) the creation of sources of credit for the benefit of the members of the society at a fair and reasonable rate of interest; (c) the use and control of the members' savings for their mutual benefit; and (d) the training and education of the members in the wise use of money and in the management of their financial affairs. The objects for credit unions in Northern Ireland (which are identical) are provided in 3(3) of the Northern Ireland Order 1985.

For the avoidance of doubt, the PRA notes that:

- the limit does not apply to ongoing fees charged to users for services provided;
- the limit does not apply to amounts invested from grants/donations;
- once invested, the PRA does not expect CUs to divest their investment should their capital decline bringing them below the cap, although CUs should consider the risk mitigants if the investment changes to represent a significant proportion of their capital (>10%).
- if the credit union's capital increases following an investment, the credit union may make additional investments in (a) CUSO(s) up to the limit.
- a credit union that intends to invest/has invested in a CUSO to be able to evidence how they have satisfied themselves that the credit union is legally and operationally separate from the CUSO and that the credit union's liability is limited to the amount invested.
 - A credit union may wish to obtain written legal advice as to whether the CUSO arrangement meets this expectation.
 - The CUSO board should include at least one independent director.
- that the credit union investing in a CUSO shares the CUSOs accounts with the PRA on request. The PRA expects credit unions to take reasonable steps to ensure that written agreements with CUSOs provide the credit union and the PRA, and any person appointed by the credit union or the PRA, with access to and unrestricted rights to financial information.

Credit Unions already invested in, or using, a CUSO

18.10 Credit unions that have already established a CUSO should review paragraphs 18.4-18.7 above and consider whether they are able to meet these expectations. Credit unions should be expected to be able to provide this information to the PRA on request. Where their CUSO arrangement does not meet the above expectations they should inform the PRA and set out a mitigation plan.

18.11 Credit union investments in a CUSO should not exceed the limit set out in paragraph 18.7 above. Where a credit union's investment exceeds this limit they should engage with the PRA on their plan to meet this expectation.

18.12 Credit unions are expected to inform the PRA which CUSOs they have invested funds in and in advance of entering into a material outsourcing agreement with a CUSO (as per paragraphs 10.4 and 10.5 of Chapter 10). This is to ensure that the PRA can understand the impact of a disruption/failure scenario.

Outsourcing expectations – expectations for credit union owners and users

18.13 There are a number of existing rules and expectations on outsourcing, governance, risk management and business continuity that apply to credit unions when outsourcing services to a CUSO.¹⁷ The fact that the credit union may (part) own the CUSO in no way diminishes the credit union's board and management accountability and responsibility to ensure outsourcing risks are identified, assessed, monitored, reported on and managed.

18.14 In addition, credit unions that part own CUSOs are expected to have a policy setting out how they will supervise the CUSO activities and manage any associated risks. This should cover:

- responsibilities of the board;
- management and board reporting;
- details of the line of risk oversight of outsourced activities including incident reporting;
- procedures for identifying, managing and mitigating risks including conflicts of interest;
- business continuity and substitutability arrangements; and
- the process for exiting the CUSO arrangement.

Proportionality

18.15 Where a credit union has outsourced its services to a CUSO but does not own the CUSO, credit unions are reminded that the PRA's outsourcing expectations apply proportionately accordingly to the size and activities of the credit union – eg the PRA has additional operational resilience expectations of credit unions with more than £10m in total assets (see paragraph 11.11) and credit unions with more than £50m in total assets (see paragraph 12.6).

18.16 The PRA also expects the nature of the CUSO to be taken into consideration, for example, the expectations in this chapter would not apply to CUSOs that provide trade association services only or to CUSOs which act as conduit only (ie allowing several credit unions to contract as a single entity. Such CUSOs would not perform any services itself or employ any staff).

¹⁸ Requirements and expectations on outsourcing for credit unions are set out in the Fundamental Rules, Chapters 10,11,13-17 in the Credit Unions Part of the PRA Rulebook, Chapters 10 – 12 of this supervisory statement, Information Gathering 2.2 and 3.3, Notifications 2.3 (1)(e) and the Allocation of Responsibilities 5.2(3), (4), and (6).
