Analyses of financial statistics

The quarterly analyses of financial statistics assess the financial transactions of the main sectors of the economy – public sector, personal sector, industrial and commercial companies, banking sector, other financial institutions and overseas. Each analysis is concerned mainly with a particular period:

3rd quarter 1971	22-42
Year 1971	180-204
1st quarter 1972	328-44
2nd quarter 1972	453-66

but it also ranges into earlier quarters and, where figures are available, into the following quarter – in the latter case in connection with banking sector figures, the currency flow, and central government financing.
