Banking sector regulatory capital: 2017 Q3

- The common equity Tier 1 (CET1) capital ratio for the UK banking sector was 14.9% in 2017 Q3, the same as in Q2. The total capital ratio also remained flat, at 20.5%.
- The level of CET1 capital decreased by 0.3% on the quarter, from £441bn to £440bn.
- There was a 0.2% decrease in total risk-weighted assets on the quarter, from £2,955bn to £2,947bn.

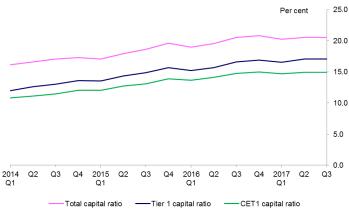

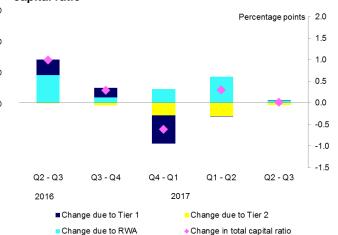

Chart 2: Contributions to quarterly change in total capital ratio²³

¹ Figures may not correspond exactly due to rounding.

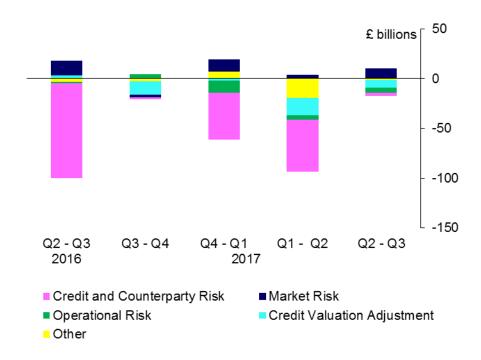

² See <u>'Further details about these data'</u> for information on the calculation of these contributions.

³ Data for all charts has been sourced from the banking sector regulatory capital tables.

Comparison of published capital ratios for the UK and the EU

Capital ratios for the UK banking sector are published by a number of organisations; the Bank of England (BoE), the European Central Bank (ECB), the International Monetary Fund (IMF) and the European Banking Authority (EBA). These ratios are not identical due to differences in firm coverage, use of transitional or endpoint capital, method of averaging and data revisions as explained below. Chart 4 shows a comparison of published capital ratios for the UK in the panel on the left with EU average ratios published by the EBA in the panel on the right. Table C provides descriptions of the underlying datasets and provides links to their definitions.

The effects of the differences in datasets and methodologies can be generalised as follows:

- Firm coverage the BoE, the ECB and the IMF publish capital ratios that represent averages of the total UK banking sector. While they all use the same data, the ECB and IMF publications are less timely and may include minor differences when compared with BoE data due to revisions. EBA aggregate statistical data exclude designated investment firms that are subsidiaries of banks headquartered outside the UK. The Financial Policy Committee's (FPC) core indicator covers major UK banks⁵ only, rather than the total UK banking sector, and this generally has a downward effect on the ratio. The EBA publish tables showing average capital ratios for a sample of EU banks, including UK banks, which have been included in Chart 4 for comparison. While they also publish charts showing UK ratios, the data behind these charts are not currently available for publication in this release.
- Averaging method the EBA Risk Dashboard presents key risk indicators as percentiles (medians shown in Table C)
 rather than as weighted means, which will tend to have an upward effect.
- Use of transitional or endpoint capital⁶ the use of endpoint capital will tend to have a slight downward effect on ratios, compared to those using transitional capital.
- Timing both timeliness and frequency vary across datasets. The banking sector regulatory capital statistical release
 and FPC core indicators are the timeliest. The EBA aggregate statistical data are published annually while all other
 datasets are published quarterly.

⁵The group currently includes Barclays, Co-operative Banking Group, HSBC, Lloyds Banking Group, Nationwide, RBS and Santander UK.

⁶ See explanatory notes for more detail.
