## Message Functionality

### Collection Description

#### BOE\_SMMD\_Reporting\_Messages ([link](#))

Each file sent under the SMMD consists of a SMMD Message (i.e. Business Message) which refers to one of the four different market segments.

A Business Message for a particular market segment consists of two components:

a) A Business Application Header (BAH) is used to identify the message and includes routing information.

b) A Document which consists of two parts: the Reporting Header and the Reporting Message for the specific market segment.

(i) The Reporting Header is used to identify the submitting reporting agent, reference period and overall content of the message.

(ii) The Reporting Message contains detailed information on the market segment transactions.

### Usage Guideline Description

#### BOE\_SMMD\_BAH\_head\_001\_ReportingMessages ([link](#))

Each file sent under the SMMD consists of a SMMD Message (i.e. Business Message) which refers to one of the four different market segments.

A Business Message for a particular market segment consists of two components:

a) A Business Application Header (BAH) is used to identify the message and includes routing information.

b) A Document which consists of two parts: the Reporting Header and the Reporting Message for the specific market segment.

(i) The Reporting Header is used to identify the submitting reporting agent, reference period and overall content of the message.

(ii) The Reporting Message contains detailed information on the market segment transactions.

### Outline

The BOE\_SMMD\_BAH\_head\_001\_ReportingMessages message is composed of 6 building blocks

**a - Organisation Identification**

Identification of a person or an organisation.

**b - Organisation Identification**

Identification of a person or an organisation.

**c - Business Message Identifier**

Unambiguously identifies the Business Message to the MessagingEndpoint that has created the Business Message.

**d - Message Definition Identifier**

Contains the MessageIdentifier that defines the BusinessMessage.

It must contain a MessageIdentifier published on the ISO 20022 website.

examplecamt.001.001.03

**e - Business Service**

Specifies the business service agreed between the two MessagingEndpoints under which rules this Business Message is exchanged.

To be used when there is a choice of processing services or processing service levels.

Example: E&I

**f - Creation Date**

Date and time when this Business Message (header) was created.

Note Times must be normalized, using the "Z" annotation.

## About this document

### Legend

| Abbreviation | Term               | Description   |
|--------------|--------------------|---|
| X            | Excluded           | An optional field or element must not be populated.                   |
| I            | Ignored            | A field or element could be populated but is ignored by the receiver. |
| [x..y]       | Multiplicity       | A field or element multiplicity has changed.                          |
| FV           | Fixed Value        | A field or element must contain a given value.                        |
| T/C          | Type / Code Change | A user-defined datatype replaces an existing simple datatype.         |
| A            | Element Added      | A field or element has been added.                                    |

| Header             | Description                       |
|--------------------|-----------------------------------|
| Index              | Element reference                 |
| LvL                | Element nesting in tree hierarchy |
| Name               | Element name                      |
| XML Tag            | Element XML tag                   |
| Mult               | Element multiplicity              |
| Type / Code        | Element formatting                |
| Rest               | Restriction type                  |
| Additional details | Other restriction specifics       |

| Type/Code Notation     | Describes the Element                                 | Examples                       |
|------------------------|---|--------------------------------|
| text{m,M}              | minimum (m) and maximum (M) length                    | text{1,35}                     |
| text{L}                | maximum (L) length, minimum length is 0               | test{10}                       |
| m <= decimal <= M      | minimum (m) and maximum (M) values                    | 0.01 <= decimal <= 9999.99     |
| fd = F, td = T         | maximum fractional (F) and total (T) number of digits | fd = 2, td = 11                |
| <<regular expression>> | regular expression pattern                            | [A-Z]{6,6}([A-Z0-9]{3,3}){0,1} |

| Index | Level | Name   | XML Tag     | Mult   | Type / Code   | Restr  | Additional details   |
