Bank of England Survey on Systemic Risk — 2015 H1

This survey asks about perceptions of risks to the UK financial system as a whole in the period ahead. It consists of six questions organised in two short blocks. It should take no longer than ten minutes to complete. More detail on the rationale behind responses is very much welcome and can be included at the end of the survey.

1. Key sources of risk to the UK financial system

The Bank of England aims to identify market perceptions of key sources of risk (emanating either from within the United Kingdom or externally) which, if they materialised in the period ahead, would cause significant loss of confidence in UK financial markets and institutions and/or disruption to the financial system.

See overleaf for some examples of risk categories which could be used to answer the question below. The list is not intended to be exhaustive, but rather as a guide to the type of answers that can be provided.

1.1 Looking ahead, which risks do you believe would have the greatest impact on the UK financial system if they were to materialise? Please list those risks in order of potential impact (ie greatest impact first).				1.2 Which of these risks would you find most challenging to manage as a firm? (tick only three)
