# Appendix to Staff Working Paper No. 779 Currency mispricing and dealer balance sheets 

Gino Cenedese, Pasquale Della Corte and Tianyu Wang

February 2019

# Appendix to Staff Working Paper No. 779 Currency mispricing and dealer balance sheets Gino Cenedese, ${ }^{(1)}$ Pasquale Della Corte ${ }^{(2)}$ and Tianyu Wang ${ }^{(3)}$ 

This appendix presents supplementary results not included in the main body of the paper.

[^0]

Figure A.1: Daily Volume on Cross-Currency Swaps

This figure displays average daily volume on cross-currency swaps based on the 2016 Triennial Central Bank Survey (BIS, 2016) and transaction-level data from the Depository Trust \& Clearing Corporation (DTCC). The latter includes over-the-counter cross-currency swaps undertaken by UK legal entities under the European Market Infrastructure Regulation (EMIR). The sample comprises major currencies - Australian dollar (AUD), Canadian dollar (CAD), Swiss franc (CHF), euro (EUR), British pound (GBP), Japanese yen (JPY) - relative to the US dollar (USD), and runs between December 2014 and December 2016.

Figure A.2: Breakdown of Cross-Currency Swap Volume
This figure displays currency, maturity, and sector breakdown of daily volume on cross-currency swaps. Volume is constructed using transaction-level data from the Depository Trust \& Clearing Corporation (DTCC) on OTC crosscurrency swaps undertaken by UK legal entities under the European Market Infrastructure Regulation (EMIR) on derivatives. The sample runs between December 2014 and December 2016.

## Table A.1: Descriptive Statistics of Dealer Banks' Variables

This table presents descriptive statistics of dealer-specific variables. Leverage Ratio is Tier 1 capital over total assets, Capital Ratio is Tier 1 capital over risk-weighted assets, Capital Ratio Requirement is the minimum requirement for the capital ratio, Bank Size is the log of a bank's total assets in levels, Liquid Asset Share is the holdings of liquid assets (i.e., cash and market loans) scaled by non-equity liabilities, and Deposit Share is the fraction of the banking organization's balance sheet financed with core deposits. These data are measured quarterly and are from the Bank of England. $\triangle$ Bank $C D S$ is the weekly change in the 5 -year CDS spread whereas $\Delta$ Bank $I V O L$ is the weekly change in the 1-month option's implied volatility. These data are collected from Bloomberg. The sample runs between December 2014 and December 2016.

|  | mean | median | sdev | $\mathrm{Q}_{25}$ | $\mathrm{Q}_{75}$ |
| :--- | ---: | ---: | ---: | ---: | ---: |
| Leverage Ratio | 92 |  | 3.80 | 1.41 | 3.02 |
| Capital Ratio | 11.42 | 10.93 | 1.80 | 10.05 | 12.67 |
| CapitalRatio Requirement | 7.05 | 6.25 | 3.35 | 5.15 | 7.25 |
| Bank Size | 25.12 | 25.51 | 2.03 | 23.73 | 26.85 |
| Liquid Asset Share | 19.82 | 20.85 | 15.77 | 7.73 | 26.18 |
| Deposit Share | 55.27 | 58.36 | 14.73 | 44.58 | 66.25 |
| D Bank CDS | 0.25 | 0.01 | 8.08 | -3.10 | 3.33 |
| D Bank IVOL | 0.10 | -0.09 | 3.83 | -1.98 | 1.90 |

## Table A.2: Summary Statistics of FX Forward Volume

This table presents summary statistics of weekly volume aggregated by currency and maturity. The volume is expressed in billions of USD and is based on contract-level FX forwards (outright forwards and forward legs of FX swaps) from the Depository Trust \& Clearing Corporation (DTCC). The sample runs between December 2014 to December 2016.

|  | AUD |  | CAD |  | CHF |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Maturity $\leq 1-$ week | 273.87 | (66.89) | 156.88 | (42.52) | 269.28 | (79.63) |
| 1 -week $<$ Maturity $\leq 1$-month | 29.79 | (11.64) | 18.33 | (7.23) | 31.91 | (10.11) |
| 1 -month $<$ Maturity $\leq 3$-month | 34.28 | (11.21) | 29.20 | (28.44) | 34.59 | (14.32) |
| Maturity > 3-month | 12.57 | (6.98) | 8.77 | (5.61) | 15.40 | (6.99) |
|  | EUR |  | GBP |  | JPY |  |
| Maturity $\leq 1-$ week | 1485.23 | (289.31) | 714.39 | (136.28) | 781.31 | (190.75) |
| 1 -week $<$ Maturity $\leq 1$-month | 199.83 | (55.23) | 93.88 | (38.32) | 94.42 | (36.70) |
| 1 -month $<$ Maturity $\leq 3$-month | 262.27 | (81.06) | 135.32 | (52.09) | 121.53 | (46.77) |
| Maturity > 3-month | 116.60 | (46.11) | 61.66 | (25.88) | 57.45 | (25.53) |

## Table A.3: Dollar Basis and Balance Sheet Constraints: Major Currencies

This table presents estimates from fixed effects panel regressions. The dependent variable is the contract-level absolute dollar basis for the major currency pairs, i.e., euro, yen and pound against the dollar, using maturities between one week and three months. The sample only includes dealer-to-clients transactions. The set of independent variables is summarized in Table A. 1 in the Internet Appendix. We include dealer, maturity, hour, currency, sector interacted with time (date), and currency interacted with both sector and time (date) fixed effects. Standard errors are clustered by currency and time dimension, and reported in parentheses. The superscripts ${ }^{*}$, ${ }^{* *}$, and ${ }^{* * *}$ indicate statistical significance at $10 \%, 5 \%$, and $1 \%$ respectively. The sample runs between December 2014 and December 2016.

## Table A.5: Difference-in-Differences: Public Disclosure

This table presents difference-in-differences estimates associated with the public disclosure of the leverage ratio on January 1, 2015. The dependent variable is the absolute volume-weighted dollar basis measured weekly. The sample only includes dealer-to-clients transactions. The treatment group includes dealer banks with a low (simple) leverage ratio as of December 2012 whereas the control group comprises dealer banks with a high (simple) leverage ratio as of December 2012. These groups are formed using the median value of a (simple) leverage ratio constructed as shareholder claims to total assets. The pre-treatment (post-treatment) period covers a month prior (post) to January 1, 2015. We exclude two weeks of data bracketing the year-end. The table also presents difference-in-differences estimates associated with a placebo date (February 1, 2016) using a month period prior (post) to this date as pretreatment (post-treatment) sample. We include dealer, currency, client interacted with time (calendar date), and client interacted with both currency and time fixed effects. Standard errors are clustered by currency dimension, and reported in parentheses. The superscripts ${ }^{*},{ }^{* *}$, and ${ }^{* * *}$ indicate statistical significance at $10 \%, 5 \%$ and $1 \%$, respectively.
